

Hydraulic Analysis win 'Clever Data' Innovation Award

with support from Multilog LX from HWM

Over the past 5 years, HWM has worked in partnership with Hydraulic Analysis Group, a leading global engineering consultancy, supporting the leak detection efforts of a variety of their clients.

For leak detection on poor condition water pumping mains, Hydraulic Analysis recommends the **Multilog LX** data logger from

HWM. Multilog LX is a highly versatile, battery powered data logger that uses GPRS technology to provide rapid data transmission at low cost.

Glyn Addicott, Operations Director at Hydraulic Analysis is pleased with Multilog LX, explaining "overall I consider the kit to be very robust and I am also pleasantly surprised at

the battery life we are getting. Our Walton Cardiff unit has been operational for over 5 years now and the battery is still going strong".

"We have saved our clients a fortune in avoiding fines as we are now reporting the bursts within a few hours of them occurring"

Glyn Addicott, Hydraulic Analysis

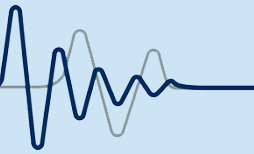

Hydraulic Analysis' continued success was recently acknowledged as they were **awarded the Institute of Water's 'Clever Data' Innovation Award - Welsh Area 2017/18**. The award recognises the success of Hydraulic Analysis' innovative Pipeline Condition Monitor System, of which Multilog LX plays an integral part.

A key reason that Hydraulic Analysis' chose Multilog LX is that Multilog LX is compatible with our cloud-based portal, HWM Online. This compatibility provides the user with the ability to monitor their pipe status in near real-time from any internet-enabled device.

"The HWM portal for checking alarms is absolutely fantastic and easy to use from a mobile device. I simply cannot fault it"

Hydraulic Analysis has now installed loggers for Severn Trent and Welsh Water and are working with Thames Water on network monitoring. We are delighted to have supported Hydraulic Analysis so far and look forward to more success working together.

About Multilog LX

Multilog LX is the highly versatile, battery powered telemetry data logger incorporating a convenient serial input that supports compatibility with a wide variety of sensors and meters, including Modbus.

A powerful, fast logging solution, Multilog LX delivers effective data recording and efficient transmission.

Designed to fit inside very shallow Atlas box installations, Multilog LX is ideal for a wide variety of applications.
